# How to Plug in Grandstream ATA

Using an ATA for your TeleVoIPs Phone system converts analog devices like fax, conference equipment, or intercom systems to VoIP. When plugging in an ATA, only specific ports on the device may be active.

Line 1 & Line 2 Indicator Lights

Internet Indicator Light

Line 1 & Line 2 Ports

LAN Port

Power port

Steps to plug in ATA:

1) Plug one side of the Ethernet cord into the LAN Port and the other side into the internet by plugging it in to your Internet router, **DO NOT** plug in directly to your modem.
2) Plug in the power cord.
3) Plug a telephone cord into the Line 1 port (green port on the right) and the desired analog device such as a fax machine.
4) If there is a second analog device, connect the Line 2 port.

Contact us – Once the device is properly connected, call our support team at 813.655.5100 option 2 so we can confirm the analog device is properly working with our system.
